SUMMARY

Computer Science student at Brooklyn College focused on front-end and UI/UX development. Experienced building web apps, animations, and interactive web experiences using React, Bootstrap, JavaScript, TypeScript, HTML, and CSS. Also worked with Figma and Adobe XD to design user-friendly interfaces and multimedia projects. Familiar with Java and C++ through coursework and school projects.

EDUCATION

BS, Computer Science, Brooklyn College, CUNY

Graduate: January 2027

- **Relevant Coursework:** Data Structures, Intro to Java, Development of Large-Scale Applications, Multimedia Computing, Programming Paradigms In C++

SKILLS

Languages: JavaScript, TypeScript, Java, Python, HTML, CSS

Frontend: React, responsive web design, accessibility (WCAG), CSS animations, UI component development

Backend & APIs: Node.js, Express.js, REST APIs

Tools: Git/GitHub, Figma, VS Code, Adobe XD, Photoshop, Microsoft Office

Languages Spoken: Fluent in French

PROFESSIONAL EXPERIENCE

Barclays Internship, Whippany, NJ

January 2024 – February 2024

Front-End Development & UX Design Intern

- Collaborated with a team to build an RWA Calculator using React, TypeScript, and CSS within an existing production codebase
- Built reusable React UI components including form inputs, layouts, and result panels for financial calculations
- Implemented validation logic for financial risk inputs including PD, LGD, EAD, and Maturity
- Integrated frontend components with backend REST APIs and handled asynchronous data fetching and error states
- Participated in code reviews, pull requests, and collaborative engineering workflows using Git

Commvault Internship, Remote

January 2025 – Feb 2025

UI/UX & Web Development Intern

- Evaluated the company website for user experience
- Analyzed a great amount of information and gave recommendations on how the information can be better arranged whether through charts or columns
- Gave presentations on how the web pages could be more presentable to users and focused on improving user experience

TECHNICAL PROJECTS

Progressive Web App – Space exploration app

<https://denvabeaubrun.github.io/cisc3610-portfolio/PWA-project/>

- An astronaut greets the user on the homepage and asks the user to choose a planet/any celestial body
- When the user clicks on a planet, the astronaut introduces the planet aloud and reads interesting facts about the planets
- The user can listen to the facts again or move on to another celestial body
- The user can save the web app to their Home Screen and access it offline
- The app uses JSON, HTML, JavaScript and CSS for styling

Multimedia Dictionary — Front-End & JavaScript Project

<https://denvabeaubrun.github.io/cisc3610-portfolio/words-project/>

- The user chooses a word from a list of 5 words from a drop-down menu
- The user can click a button to hear the word spoken aloud
- The word the user chooses is displayed in a text area in a sentence and the user can click a button to hear the sentence aloud
- The words spoken aloud is build with a Web Speech API

Resume — A Hannah Montana inspired Resume website

<https://denvabeaubrun.github.io/cisc3610-portfolio/Resume%20Lab/>

- The page opens to nav bar built with bootstrap. It lists sections, Home, About, Education, Experience, Skills, Portfolio, Awards and Contacts
- When the user clicks on an option in the navbar, it scrolls to the respective section
- The portfolio section uses the carousel component from bootstrap to help flip through her achievements
- Uses html, and CSS
